ARTHUR HABICHT · NOVEMBER 2026

AI Gets Physical

From robots to rooms that sense, and why Europe should develop its own AI Infrastructure

Machines that perceive, understand and act in the physical world

After NVIDIA's definition of physical AI

Flink Robotics: robots that sort parcels

Robotaxis: driving from cameras, lidar and radar

NVIDIA Cosmos: surgical robots learn from video

Sources: NVIDIA glossary; Flink Robotics (company figures); Waymo (Mar 2026); Cosmos-H-Surgical, arXiv 2512.23162

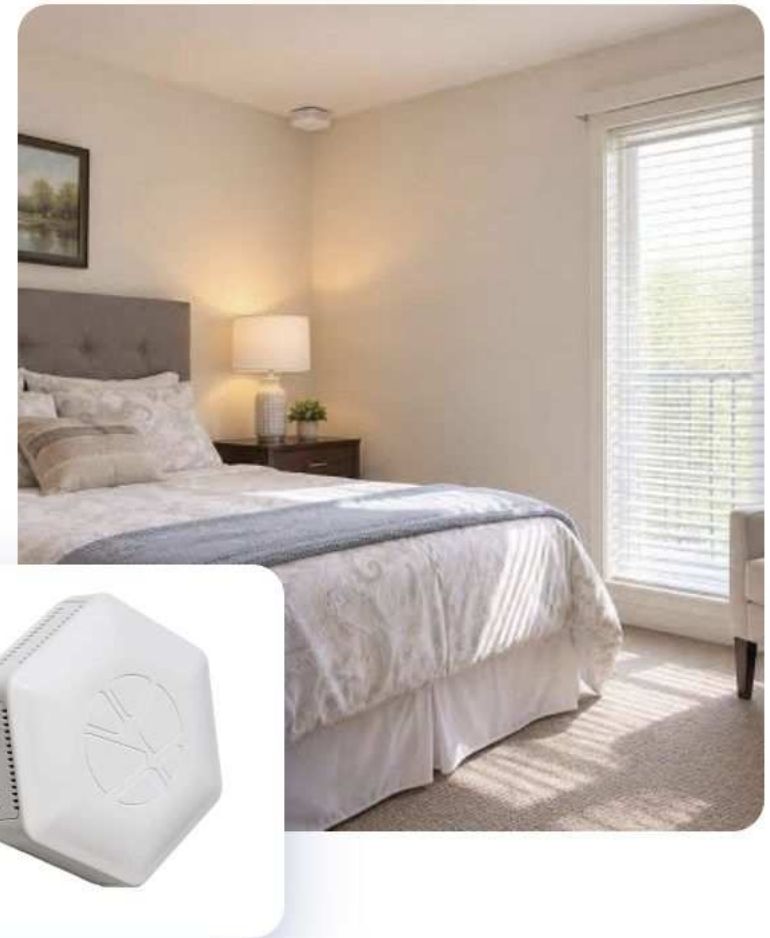

PHYSICAL AI IN ACTION

Meet Helpany

A ceiling radar that keeps senior living residents safe, without a camera

CASE STUDY: FALL PREVENTION

Preventing falls by detecting residents at risk

Falls are the costliest risk among seniors

$80B
a year in US medical costs from falls of older adults (CDC)

>1 in 4
residents have a fall every year

~$10k
cost of one fall to the community

~$250k
average cost per liability claim; falls are the #1 cause

Why it keeps growing

Big market: 3.3M senior living apartments and nursing beds, a ~$320B industry, twice US pet spending

More oldest-old: the 80+ population doubles by 2045, from 15M to 29M

Every unseen fall is paid for twice: in care costs and in court. Prevention beats detection.

Sources: CDC researchers (Injury Prev. 2024); NPALS 2025; SafelyYou 2026 survey; CNA; Marsh 2024; jury verdicts

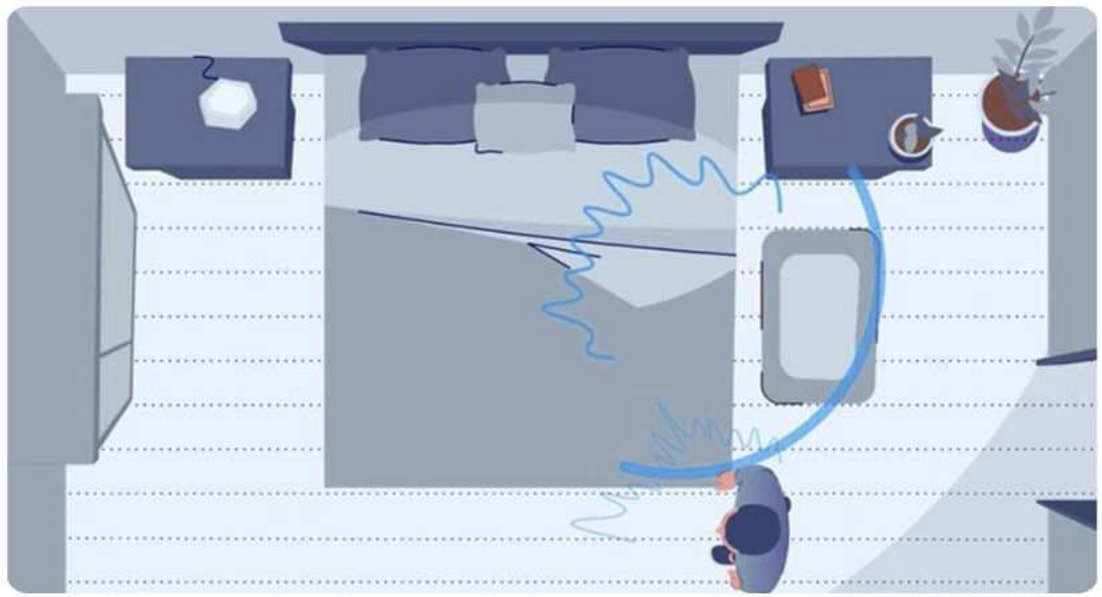

HELPANY 2/3 · HOW HELPANY SOLVES IT

A room that senses risk before a fall

1 · Sense
A ceiling radar reads movement in the room.

2 · Understand
AI learns each resident’s routines and spots anomalies

3 · Act
Staff get risk indications, and care-plan improvements.

The sensor follows movement through the room, day and night

-72% Falls
in Arizona and Pennsylvania communities

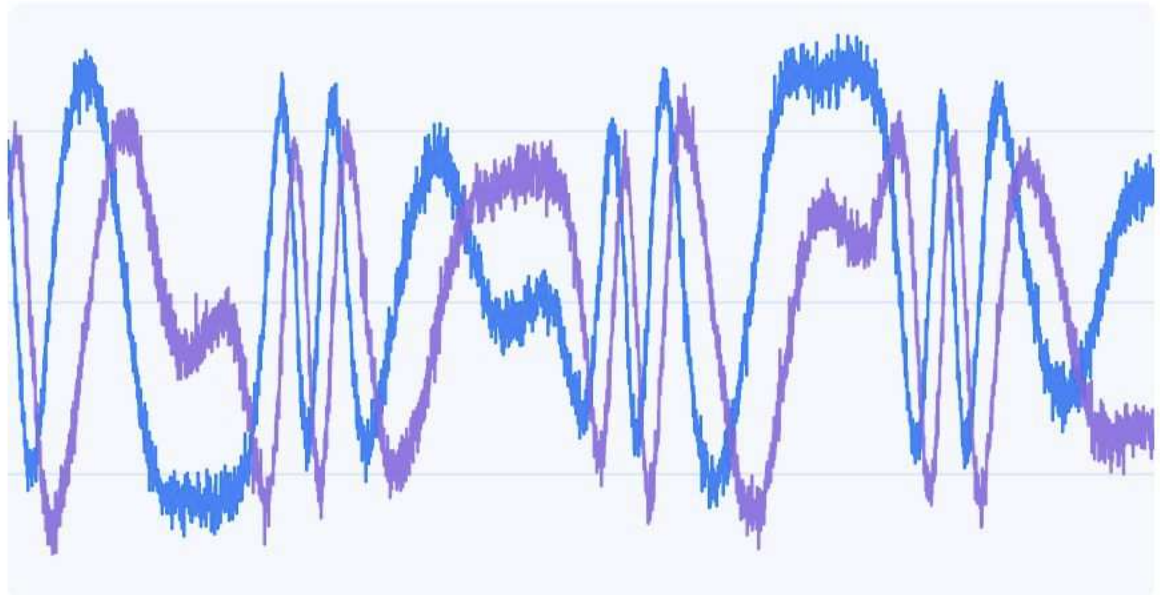

3,000+
apartments covered

Company-reported results. Sources: helpany.com; startupticker (Oct 2026); InBusiness PHX (Nov 2025); ACCESS Newswire (2025–26)

Raw radar signals become decisions

Radar waves reflect off the body → **Deep learning** for processing and understanding → **Action:** risk scores, prevention and detection

Raw radar data: two signals, **I** and **Q**, over time

Why radar

- **Privacy**
- **No wearables**
- **Works everywhere, anytime**

Why advanced AI is necessary

Analyzing raw radar signals requires understanding human motion in complex environments

Raw IQ data shown is an illustration, not a real recording. Exact production models are proprietary

RECOGNITION

TIME Best Inventions 2026

Helpany Paul is on TIME's list of best inventions

> "Traditional camera-based monitoring compromises privacy by turning living spaces into surveillance zones."

Paul uses "ceiling-mounted radar and AI" and has "helped reduce falls by up to 72%" in Arizona and Pennsylvania communities

AI SOVEREIGNTY

Sovereignty needs models and the backbone

> “In a world where we imported all our digital services from the United States, we would have no leverage over them.”

Arthur Mensch, CEO of Mistral AI, French National Assembly 12 May 2026

Jun 2026

A US order pulled Mythos 5 for ~3 weeks

Oct 2026

Starlink cuts hampered Ukraine’s drones, with no European alternative

MODELS

Mistral AI and Apertus

COMPUTE

7 EU AI gigafactories from 2028

CONNECTIVITY

IRIS²: EU satellites from 2029

CHIPS AND ENERGY

The base layer AI runs on

If your AI, cloud or satellite supplier switched you off tomorrow, what would stop working?

Sources: Assemblée nationale hearing record, 12 May 2026, p. 4 (French, our translation)Reuters (Oct 2026); Anthropic; EUSPA (IRIS²); EU gigafactory call

BUILDING OUR OWN

Swiss and European AI initiatives worth knowing

Apertus · Swiss AI

ETH Zurich, EPFL and CSCS built a fully open LLM

swiss-ai.org

Proton Lumo

Private AI assistant built in Europe

lumo.proton.me

Mistral AI

Europe's frontier lab: open-weight models, plans 1 GW of compute by 2029

mistral.ai

dreamleap

Swiss company building agentic AI for businesses

dreamleap.com

Open, private and local is possible: Lumo already runs Apertus, a Swiss model trained on Swiss compute.

THREE TAKEAWAYS

What to take home today

1

Physical AI is coming

AI is more than chatbots

2

AI solves new problems

Not just doing today's work faster

3

Europe needs a sovereign stack

Not only its own models

THANK YOU · LET'S CONNECT
